

How to Add a Product

A simple step-by-step guide for shop staff — ZIC POS

Adding a product takes about a minute. You enter the item once, set up the pack sizes you sell it in (single, box, carton...), and the system handles all the counting and price conversions for you.

1 Open the form

Go to **Admin** → **Products** and click the **+ Add Product** button at the top right. A window pops up.

2 Fill the basic info

FIELD	WHAT TO TYPE	EXAMPLE
Product Name	The name of the item	Chocolate Cookies
Barcode	Scan with the camera button, or click Gen to create one	ZIC123456789
Category	Pick from the list (or leave as "None")	Snacks

Tip: No barcode on the item? Just click **Gen** and the system makes a unique one for you.

3 Set your default prices

- **Default Purchase Price** — what *you* pay for one single piece (your cost).
- **Default Sale Price** — what the *customer* pays for one single piece.

These are the prices for your **base unit** (one piece). You'll set bigger-pack prices in the next step.

4 Set up your units (the important part)

The **Units, Conversion & Pricing** table lets you sell the same product in different pack sizes.

The **base unit** is your smallest sellable piece — all stock is counted in it. By default it's called **Piece**, but you can rename it (e.g. "Bottle", "Egg", "Kg").

To add a bigger pack (like a Box):

1. Click **+ Add Unit**.
2. **Unit Name** → type the pack name, e.g. **Box**.
3. **Equals (in Pieces)** → how many pieces are inside. A box of 6 → type **6**.
4. **Purchase & Sale** → the cost and selling price for the whole box.
5. The **Profit** column fills in automatically.

Example setup:

UNIT	EQUALS	PURCHASE	SALE	PROFIT
Piece (Base)	1	8	10	2
Box	6	45	60	15
Carton	24	170	230	60

The small badges under each name let you **Set base** (mark the smallest piece — only one can be base) and pick the **Default sale** unit (what the cashier sees first at checkout).

5 Enter your starting stock

In the **Initial Stock** box, pick *any* unit and type how much you have — the system converts it for you.

- Received **2 Cartons**? Pick **Carton**, type **2**.
- It instantly shows **Total Stock = 48 Pieces** (2×24).

You never have to count single pieces — enter stock whichever way is easiest.

6 Check the preview (optional)

- **Stock Summary** — shows your stock in neat chunks (e.g. *2 Cartons*).
- **Real-time Stock Preview** — test "If you sell 1 Box" and see what's left. It warns you in red if stock would go negative.

7 Save

Click the green **✓ Save Product** button at the bottom. Done! Your product is ready to sell.

Quick rules to remember

- ✓ Stock is **always stored in the base unit** (pieces).
- ✓ You can **sell in any unit** — the system converts and subtracts stock automatically.
- ✓ Each unit can have its **own price**.
- ✓ **Unit names must be unique**, and conversion must be **greater than 0**.
- ✓ Purchase and sale prices **cannot be negative**.
